Vladyslav **Sapkovych**

Software Developer

Košice, Slovakia

+421911880819 | sapkovich.vladislav@gmail.com | nafty.is-a.dev | Nominy

Summary

Software developer and Computer Science student with full-stack internship experience. Built and shipped transcription tools, browser extensions, backend services, and game mods. Hands-on experience with interactive audio editors, GPU inference, automated testing, and production releases.

Skills

Languages	TypeScript/JavaScript, Python, Java, C#, C/C++, SQL, Lua
Backend	Node.js, Bun, Express.js, REST APIs, PostgreSQL, .NET, Entity Framework Core
Frontend / Web	React, Chrome Extensions (Manifest V3), HTML, CSS; Vue, Svelte
Systems / Tools	Linux, Git, Docker, GitHub Actions, browser automation and regression testing
Inference / Audio	WebGPU, ONNX Runtime, speech recognition, audio processing, LLM API integration

Work Experience

AI Data Labeling / Transcription Specialist

Remote

Russian-language AI training data — *2025 – Present*

- Transcribe and review Russian-language audio against detailed annotation and quality requirements.
- Developed the Babel tooling suite from recurring workflow problems, combining hands-on labeling experience with software development and feedback from fellow labelers.

GrensaAI

Remote

Full Stack Web Engineer Intern — *Aug. 2025 – Dec. 2025*

- Developed React extension features and Express.js/Python services in a two-developer team.
- Built an OpenAI-powered Tone of Voice feature using company knowledge-base policies; integrated it into textareas across the product.
- Supported a B2B product as a first responder; incorporated user feedback into one of its most frequently used features.

Projects

Babel – Transcription and Review Tooling

GitHub

TypeScript / React / Bun / WebGPU / ONNX Runtime / GitHub Actions — *2025 – Present*

- Built and shipped four Chrome extensions covering transcription editing, AI-assisted drafting, quality review, and grading; maintained shared packages and a supporting backend.
- Implemented multi-speaker editors with synchronized audio, waveform navigation, keyboard editing, split panes, and native save/Undo integration.
- Integrated local WebGPU speech recognition, punctuation, and audio enhancement alongside API-based review, preserving human verification and transcript/timing consistency.
- Maintained automated unit and browser regression tests, CI pipelines, and Chrome Web Store releases; diagnosed compatibility and performance issues as the host application changed.

Closed Captions for Specials

ModWorkshop / GitHub

C++ / Lua / Unreal Engine 4.27 / UE4SS / Wwise — *2025*

- Developed a PAYDAY 3 accessibility mod displaying closed captions for special-enemy audio cues.
- Connected Wwise audio callbacks to Lua and Unreal UI; synchronized actor-attached captions with sound duration.

RimMercenaries

Steam Workshop / GitHub

C# / RimWorld 1.5–1.6 — *2025*

- Developed a mercenary recruitment system with character previews, configurable loadouts, and colony-integration mechanics.
- Supported mod-compatible xenotypes and multilingual UI; published on Steam Workshop for RimWorld 1.5–1.6.

Education

Technical University of Košice (TUKE)

Košice, Slovakia

B.S. in Computer Science (in progress) — *2024 – Present*
