Vladyslav **Sapkovych**

Software Developer

Košice, Slovakia

+421911880819 | sapkovich.vladislav@gmail.com | nafty.is-a.dev | Nominy

Summary

Computer Science student and software developer with professional experience in frontend development, AI training-data workflows, and automation tooling. Built software with real users: PAYDAY 3 accessibility tooling, a RimWorld mod with thousands of subscribers, and TypeScript browser extensions for transcription and review. Interested in software engineering roles involving backend, systems, infrastructure, or developer tooling.

Skills

Languages	Java, C#, JavaScript/TypeScript, SQL, C/C++, Python, Lua
Backend	.NET, Entity Framework Core, PostgreSQL, Node.js, Express.js, REST APIs
Frontend / Web	React, Vue, Svelte, HTML, CSS, browser-extension development
Systems / Tools	Linux, Git, Docker, GitHub Actions
AI / Game Systems	AI data pipelines, transcription tooling, workflow automation, Minecraft Forge/NeoForge

Work Experience

AI Data Labeling / Transcription Specialist

Remote

Russian-language AI training data — *2025 – Present*

- Transcribe and annotate large volumes of Russian-language audio for AI training, following detailed quality and formatting requirements.
- Built custom browser extensions and automation tools to reduce repetitive labeling work and improve output consistency.
- Developed AI-assisted preprocessing with human verification, increasing throughput over the manual workflow while maintaining required QA standards.
- Identified platform inefficiencies and worked with QA, operations, and engineering contacts on workflow and tooling improvements.

GrensaAI

Remote

Full Stack Web Engineer Intern — *Aug. 2025 – Dec. 2025*

- Developed React frontend and backend features for a Chrome extension product in a two-developer team.
- Built the Tone of Voice feature end-to-end with the OpenAI API, rewriting text according to company policy extracted from a knowledge base.
- Integrated Tone of Voice into the main UI's textareas; it became one of the product's most frequently used features.
- Fixed Express.js and Python API services and served as a first responder, helping maintain 99.9% uptime.

Projects

Closed Captions for Specials

ModWorkshop / GitHub

C++ / Lua / Unreal Engine 4.27 / UE4SS / Wwise — *2025*

- Developed a PAYDAY 3 accessibility mod displaying closed captions for special-enemy audio cues.
- Connected Wwise audio callbacks to Lua and Unreal UI, synchronizing actor-attached captions with sound duration.
- Published on ModWorkshop with 330+ downloads and 26 likes.

RimMercenaries

Steam Workshop / GitHub

C# / RimWorld 1.5–1.6 — *2025*

- Developed a mercenary recruitment system with character previews, configurable loadouts, and colony-integration mechanics.
- Supported mod-compatible xenotypes and multilingual UI; addressed player feedback through updates and community support.
- Adopted by 5,200+ Steam Workshop subscribers, with 700+ favorites.

Babel – Data Labeling Extensions

GitHub

TypeScript / Chrome Extensions / AI APIs — *2025 – Present*

- Built browser extensions used by data-labeling workers for audio transcription, drafting, and review.
- Added configurable shortcuts, audio segmentation and timing tools, and transcription linting to reduce repetitive editing.
- Integrated AI-assisted drafting and review into a human-in-the-loop workflow, improving speed while retaining manual verification.

Education

Technical University of Košice (TUKE)

Košice, Slovakia

B.S. in Computer Science (in progress) — *2024 – Present*
